

High-Frequency Horn Flare for Audio Systems

This high-frequency horn flare is designed for professional audio applications. It features a rectangular mouth and throat adapter for integration with compression drivers, ensuring controlled directivity and optimized acoustic performance.

Product Overview

Professional High-Frequency Audio Solution

This high-frequency horn flare is engineered specifically for professional audio reinforcement environments. It features a precision-designed rectangular mouth that facilitates wide, controlled sound dispersion across the listening area. Built from durable, high-rigidity materials, the unit effectively minimizes unwanted resonances, ensuring accurate and clean sound reproduction for demanding sound systems.

Technical Specifications

Application

Sound Reinforcement • Professional Audio

Dispersion Type

Wide dispersion

Construction

Durable, Rigid, Resonance-minimized

Mounting

Integrated throat adapter for compression drivers
