

# High-Lift Jack for Vehicle and Off-Road Use

High-lift jacks are versatile tools used for lifting vehicles, pulling posts, and winching in off-road and industrial applications. They feature a sturdy steel construction, a high lifting capacity, and a wide base for stability.

## Product Overview

### Versatile Lifting Solution

This high-lift jack is engineered for demanding off-road and industrial environments, providing reliable performance for vehicle lifting, post pulling, and winching tasks. Constructed from heavy-duty steel, it features a robust design that ensures durability under significant loads. Its wide base enhances stability during operation, making it an essential tool for recovery and maintenance in challenging conditions.

## Technical Specifications

### Key Design Features

- Wide base for enhanced stability
- Multiple lifting points along the bar
- Sturdy steel construction
- Manual operation system

Material	Heavy-duty steel
Operation	Manual handle operation
Primary Applications	Vehicle Lifting, Off-Road Recovery, Winching, Post Pulling, Industrial Use
