

High Mounting Pad Wafer Ball Valve

This wafer ball valve features a short face-to-face standard. It is designed for industrial applications requiring secure and efficient flow control.

Product Overview

High-Performance Wafer Ball Valve

This wafer-style ball valve is engineered for industrial flow control applications requiring high efficiency and minimal pressure drop. Its robust construction features a high mounting pad design, specifically built to facilitate seamless actuator integration. Compliant with ISO 5211 standards, this valve ensures reliable sealing and secure installation in diverse piping systems.

Technical Specifications

Valve Category

Wafer Ball Valve • Thin Profile

Installation Features

- High mounting pad for direct actuator assembly
- Precision-machined body
- Threaded holes for secure bolting
- Minimal pressure drop design

Model Series	Q71F
Mounting Standard	ISO 5211
Body Materials	Stainless Steel, WCB (Carbon Steel)
