

High Performance Butterfly Valve

This high performance butterfly valve is designed for industrial applications. Its robust construction ensures reliable operation in demanding environments, offering tight shutoff and efficient flow regulation.

Overview

High Performance Butterfly Valve

This high-performance butterfly valve is engineered for both control and tight shut-off applications, making it an essential component for demanding industrial environments. Its robust construction, featuring a double offset design, ensures reliable operation and extended service life even in high-cycle, high-temperature, and abrasive conditions. It is particularly well-suited for critical sectors including refining, power generation, petrochemical, and chemical processing.

Technical Specifications

Recommended Industries

- Refining
- Power Generation
- Petrochemical
- Chemical Processing

Operational Capabilities

Tight Shut-off • High Cycle • High Temperature • Abrasive Resistant

Design Type	Double offset
Construction Materials	Stainless Steel, Carbon Steel
Actuation	Yes
