

High Performance Cutting Machine

This high-performance cutting machine is designed for precision and efficiency. It features a robust build, advanced cooling system, and user-friendly interface.

Overview

Professional Heavy-Duty Cutting Solution

The ACUT series is engineered specifically for professional environments requiring heavy-duty cutting performance. Featuring high-frequency (HF) ignition, this power source ensures reliable arc starts to minimize defects during the initiation process. It is optimized for precision manual cutting, delivering consistent and clean results on steel materials up to 55 mm in thickness.

Performance Metrics

Max Cutting Thickness

55 mm

Steel Thickness

Ignition System

High-Frequency (HF) Ignition

Usage

Application

Professional Use, Heavy Duty, Manual Cutting
