

High-Performance Injection Molding Machine

This injection molding machine is a high-performance industrial machine designed for precision plastic part manufacturing. It features a robust hydraulic system, advanced control technology, and a large clamping force to accommodate a wide range of mold sizes.

Overview

High-Performance Injection Molding Solution

This high-performance industrial injection molding machine is engineered for precision plastic part manufacturing. It incorporates a robust hydraulic system and advanced control technology to ensure consistent dimensional accuracy and superior surface finishes. Designed for efficiency, the machine features an energy-saving servo motor system that optimizes power consumption while maintaining precise injection control.

Technical Specifications

| | |
|----------------|---|
| Machine Series | YJW11000 Series |
| Key Features | High Clamping Force, Energy-Efficient Servo Motor, Precision Injection Control, User-Friendly Interface |

Safety & Compliance

Safety Systems

- Emergency stop buttons
- Safety interlocks
- Overload protection

Performance Metrics

Operational Highlights

11000 kN

Series Designation
