

High Performance Water Pump

This high-performance gasoline water pump is designed for efficient water transfer. It features a robust engine and durable pump construction for reliable operation in demanding environments.

Overview

High Performance Water Pump

This high-performance water pump is designed for efficient water transfer in demanding environments. Featuring a robust engine and a durable aluminum alloy pump body, it offers a lightweight design that is easy to handle. With its double impeller structure and triple water outlet configuration, it provides high lift capabilities and supports simultaneous water supply at multiple locations.

Technical Specifications

Engine Displacement	212 cc
Body Material	Aluminum alloy
Impeller Structure	Double impeller
Number of Water Outlets	3

Features

Key Features	Lightweight, High Lift, Multi-outlet Supply, Durable Construction
--------------	---

Applications

Recommended Applications

- Irrigation
- Construction sites
- General water transfer
