

High-Precision CNC Machine Tool

This CNC machine tool is engineered for high-precision machining across various operations. It features a user-friendly control panel that facilitates easy programming and monitoring.

Product Overview

High-Precision CNC Machining Excellence

This high-precision CNC machine tool is engineered for demanding industrial applications that require automated and highly accurate material removal. Its robust construction ensures exceptional stability during operation, maintaining tight tolerances for various machining tasks. Equipped with a user-friendly control panel, it allows for efficient programming and real-time monitoring of complex production workflows.

Key Features

Core Capabilities

- High-precision material removal
- Automated machining operations
- Robust construction for enhanced stability
- User-friendly control interface
- Real-time monitoring and programming

Technical Specifications

Model Number

SY36

Operation Type

CNC (Computer Numerical Control)

Application

Industrial Machining, Automated Production, Precision Engineering

Performance Metrics

Performance Highlights

36 Model

Series Identifier
