

High Precision Collet for Machine Tools

These high-precision collets are designed for accurate and secure tool holding. They are suitable for CNC machines, milling machines, and other precision machine tools.

Overview

High Precision Collet Solutions

These high-precision collets are engineered from high-quality tool steel to ensure superior durability and persistent accuracy during machining operations. Featuring precision fine internal and external grinding, they are designed to minimize runout and vibration for optimal surface finish. Ideal for high-speed drilling machines and various precision tools, these collets provide a reliable, secure grip for demanding industrial applications.

Technical Specifications

Recommended Applications

- High speed drilling machines
- Milling machines
- Turning operations
- CNC machining

Material	High quality Tool Steel
Manufacturing Process	Precision Internal Grinding, Precision External Grinding

Services

Customization	Yes
Customization Service	Customization service available to meet specific customer requirements.
