

High-Precision Rolling Bearings

These high-precision rolling bearings are engineered for demanding applications. They feature robust construction and come in various sizes to suit diverse load requirements.

Product Overview

High-Performance Rotational Support

These high-precision rolling bearings are engineered for demanding industrial and automotive applications requiring exceptional reliability. Designed to handle significant load requirements, they feature a robust construction that ensures stable performance under high-stress conditions. Each unit is built to withstand rigorous operation, making them an ideal choice for high-performance machinery and complex systems.

Technical Specifications

Boundary Dimensions and Load Ratings

Designation	d (mm)	D (mm)	B (mm)	Cr (kN)	Weight (kg)
23122CAMB/W33	110	180	56	364	6
23030CAMB	150	225	56	428	7.8
22230	150	270	73	750	18.6
22330	150	320	108	1270	41.5
22232	160	290	80	848	24.6
23032/W33	160	240	60	510	9.8

Lubrication Support

Grease, Oil

Product Features

Core Applications

- Industrial Machinery
- Automotive Systems
- High-Performance Rotational Systems
