Overview

High-Pressure Direct Drive Pump

This high-pressure direct drive pump is engineered for demanding industrial cleaning and pressure washing applications. It features a robust forged brass cylinder and an anodized crankcase for superior durability and corrosion resistance. Equipped with high-quality components like ceramic plungers and German Parker water seals, this pump ensures consistent, reliable performance in professional environments.

Construction & Materials

Build Materials	Forged Brass Cylinder, Anodized Crankcase, Ceramic Plungers
Sealing Technology	German Parker water seal

Performance & Features

Key Features

- Fixed rate chemical injector
- Built-in self suction unloader
- Pressure adjustable
- In-line water inlet filter
- Quick connect outlet
- Thermal relief valve

Optional Accessories

Pressure gauge • Adjustable chemical injector
