

High Pressure Fluid Control Components

These high-pressure fluid control products are used in drilling, cementing, and logging operations. The product line includes unions, plug valves, swivel joints, and safety valves designed for high-pressure fluid control.

Overview

High-Pressure Fluid Control Solutions

This comprehensive range of high-pressure fluid control components is engineered for the most demanding petroleum and petrochemical applications. The product line includes a wide variety of valves, fittings, and integral connections, alongside sophisticated manifold systems for drilling, cementing, and testing. Designed for safety and reliability, these components support operations ranging from 21MPa to 105MPa and are suitable for both offshore and land-based drilling environments.

Technical Specifications

Nominal Bore Range	2" to 5"
Pressure Rating Range	3000psi to 15000psi (21MPa to 105MPa)

Applications

Primary Applications	Drilling, Cementing, Logging, Oil Testing, Acidizing/Fracturing, Coiled Tubing, Sand Control, Offshore Operations
----------------------	---

Product Range

Available Components

- Unions
- Plug valves
- Swivel joints
- Check valves
- Safety valves
- Choke valves
- Gate valves
- Integral connections
- Straight pipes

Manifold Systems

Manifold Configurations

- Choke and kill manifolds
- Mud manifolds
- Stand pipe manifolds
- Hose loops
- Wax bead manifolds
- High & low pressure combination manifolds
- Wellhead test devices
- BOP manifold systems
