

High-Pressure Food and Beverage Homogenizer

This high-pressure homogenizer is encased in a polished stainless steel shell for a refined appearance. It finds application across diverse modern industries, including the milk, food, and pharmaceutical sectors.

Product Overview

High-Performance Homogenization

This high-pressure homogenizer is designed for the fine processing of liquid materials, making it an essential tool for industries such as dairy, beverage, pharmaceutical, and biological production. By applying high-pressure homogenization, the machine effectively prevents delamination and significantly enhances the fineness, cleanliness, and overall inner quality of the final product. Encased in durable, polished stainless steel, this equipment combines robust industrial performance with a refined aesthetic.

Industry Applications

Dairy, Beverage, Pharmaceutical, Biological, Edible Chemicals

Technical Specifications

Performance Models

Model	Pressure (MPa)	Flow (m ³ /h)	Power (kW)	Dimensions (mm)	Weight (kg)
GJB1500-25	25	1.5	11	1000x700x1100	800
GJB1500-40	40	1.5	22	1050x1250x1350	1250
GJB1500-60	60	1.5	37	1450x950x1600	1500

Design & Build

Design Features

- Polished stainless steel protective shell
- Integrated control buttons on shell
- Bright and fine aesthetic finish

Construction Material

Polished Stainless Steel
