

High-Pressure Forged Valve Body

High-pressure forged valve body designed for robust performance in demanding industrial applications. Constructed from durable materials to ensure longevity and reliability under high-pressure conditions.

Product Overview

High-Pressure Forged Valve Body

This high-pressure forged valve body is engineered for robust performance in demanding industrial environments. Constructed from durable materials, it ensures long-term reliability and structural integrity under significant pressure conditions. Its precision-machined design optimizes fluid flow while minimizing leakage, making it a dependable component for critical fluid handling systems.

Technical Specifications

Available Models

- High-Pressure Valve Body 131
- High-Pressure Valve Body 161

Application Suitability

High-Pressure Systems, Fluid Handling, Industrial Applications

Performance Features

Key Performance Indicators

131 Series

Model 131 Pressure Class

161 Series

Model 161 Pressure Class

Engineering Qualities

Forged Construction • Leak-Resistant • Precision Engineered
