

High-Pressure Industrial Water Purification System

This high-pressure system purifies water for industrial applications. It includes a multi-stage pump, accumulator tank, and stainless steel piping.

System Overview

High-Pressure Industrial Purification

This high-pressure industrial water purification system is engineered for demanding commercial applications that require consistent, high-purity water output. Built on a robust black base frame, the unit integrates a multi-stage pump powered by a high-efficiency electric motor to maintain operational pressure. With intuitive control panels and precision instrumentation, it provides reliable performance and easy monitoring for industrial environments.

Key Components

- Blue accumulator tank
- Multi-stage high-pressure pump
- Black electric motor drive
- Integrated control panel
- Stainless steel piping network

Technical Details

Material Specifications

Component	Material
Frame	Black Powder-coated Steel
Piping	Stainless Steel
Accumulator	Reinforced Synthetic

Monitoring & Control

Digital Display, Indicator Lights, Pressure Gauges, Valve Controls
