

High-Pressure Pump End with Optional Impeller

This high-pressure pump end is designed for demanding applications. It features an optional double impeller configuration for increased head pressure and bearing support for enhanced durability.

Product Overview

High-Pressure Pump End

This high-pressure pump end is engineered for demanding industrial environments requiring reliable fluid transfer. The design allows for flexible configuration, including an optional double impeller setup to significantly increase head pressure. Built with premium mechanical seal support and optional bearing reinforcements, this unit ensures durability and consistent performance in challenging applications.

Technical Specifications

Inlet/Outlet Size	40 mm
Total Weight	12 kg

Key Features

Component Standards

- Robust industrial design
- High-quality mechanical seal support
- Optional bearing support for enhanced durability

Available Configuration Options	Double Impeller, Bearing Support, High-Pressure Design
