

High-Pressure Washer Pump with Direct Engine Drive

This high-pressure washer pump is designed for direct engine drive applications. It features a robust construction with a brass pump head, aluminum alloy crankcase, and ceramic pistons for extended durability and performance.

Product Overview

High-Performance Direct Drive Pump

This high-pressure washer pump is engineered for direct engine drive applications, offering a robust solution for demanding cleaning environments. Built with high-quality materials including a brass pump head and ceramic pistons, it ensures extended durability and consistent performance. The integrated thermal relief and pressure unloader valves provide essential safety and operational control for industrial, commercial, and residential use.

Construction & Materials

Pump Head Material	Brass
Crankcase Material	Aluminum Alloy
Piston Material	Ceramic

Features & Safety

Drive Configuration	Direct Engine Drive
Safety Features	Thermal Relief Valve, Built-in Unloader Valve

Applications

Suitable Environments

- Industrial cleaning
- Commercial maintenance
- Residential cleaning
