

High-Purity Graphite Powder

High-purity graphite powder is suitable for diverse industrial applications, including lubrication and conductive coatings. The powder is characterized by its fine particle size, high carbon content, and excellent thermal and electrical conductivity.

Product Overview

High-Purity Graphite Powder

This high-purity graphite powder is engineered for demanding industrial applications, offering exceptional thermal and electrical conductivity. Its fine particle size and high carbon content make it an ideal choice for advanced manufacturing processes. It serves as a versatile material for lubrication, conductive coatings, batteries, friction materials, and powder metallurgy.

Key Characteristics

Material Properties

High Purity, Fine Particle Size, High Carbon Content, Thermally Conductive, Electrically Conductive

Industrial Applications

Primary Applications

- Industrial Lubrication
- Conductive Coatings
- Composite Materials
- Battery Manufacturing
- Friction Materials
- Powder Metallurgy
