

High Speed Folding and Gluing Machine

This machine features a strong, integrated steel sheet basement, providing rigidity and a compact structure. It is designed for easy operation.

Product Overview

High-Performance Folding and Gluing

This high-speed folding and gluing machine is engineered for efficient processing of cardboard boxes in demanding production environments. It features robust construction and advanced automation to ensure consistent quality and streamlined output. Designed for flexibility, the system allows for quick component changes to accommodate various box sizes, making it an ideal solution for packaging and converting industries.

Technical Capabilities

Folding Specifications

- First line folding: 180 degrees
- Third line folding: 135 degrees
- Long-distance folding design for easy box opening

Operational Flexibility

Yes

Component Changeover

Modular design allows for easy component changes to accommodate different cardboard box sizes.

Performance Metrics

Key Performance Indicators

180 deg

First Line Folding Angle

135 deg

Third Line Folding Angle
