

High-Speed Metal Cut-Off Machine

This high-speed cut-off machine is designed for precision cutting of metal and other materials. It features a robust motor, adjustable cutting angle, and a secure clamping system for workpiece stability.

Overview

Precision Metal Cutting Solution

The 7216N high-speed cut-off machine is engineered for precision cutting of metal and various industrial materials. It features a robust motor designed for consistent performance and a secure clamping system that ensures workpiece stability during operation. With an adjustable cutting angle, this machine is an ideal choice for construction and industrial applications requiring clean, accurate, and efficient cuts.

Technical Specifications

Model Number	J3G-SH03-400
Machine Type	High-Speed Cut-Off Machine

Features

Key Features

- Robust high-speed motor
- Adjustable cutting angle
- Secure workpiece clamping system
- Designed for industrial and construction use

Status

NEW
