

High-Speed Overlock Sewing Machine for Apparel and Textile

This high-speed overlock sewing machine is designed for garment, shoes, and accessories manufacturing. It features a precision cutting mechanism, adjustable stitch length and width, and an automatic lubrication system.

Overview

High-Speed Overlock Solution

This high-speed overlock sewing machine is engineered for precision and efficiency in garment, footwear, and accessory manufacturing. Designed to handle a variety of fabric types, it features a robust cutting mechanism and an integrated automatic lubrication system to ensure consistent performance during high-volume production. This model provides reliable stitch control, making it an essential asset for professional textile assembly lines.

Technical Specifications

Model Number	BSO-747F-512MI-25
Machine Type	High-Speed Overlock

Features

Key Features

- Precision cutting mechanism
- Adjustable stitch length
- Adjustable stitch width
- Automatic lubrication system

Applications

Industry Application	Apparel Manufacturing, Footwear Production, Textile Industry, Accessories
----------------------	---
