

High-Speed Plastic Mixer

This high-speed mixer is designed for plastic processing applications. It ensures homogeneous mixtures of plastic materials and additives with its robust motor and cooling system.

Overview

High-Performance Mixing Solution

This high-speed plastic mixer is engineered for demanding plastic processing applications, ensuring consistent and homogeneous blends of materials and additives. The system features a robust motor, a precision-controlled cylindrical mixing chamber, and an integrated cooling mechanism for operational efficiency. Designed for reliability, it provides precise control over the mixing process to meet rigorous industrial standards.

Technical Specifications

Key Features

- High-speed mixing capability
- Precision control panel
- Cylindrical mixing chamber design
- Advanced discharge mechanism
- Integrated cooling system
- Robust, high-efficiency motor

Application Suitability

Plastic Processing • Material Blending • Additive Mixing

Available Models

SHR-200A, SRL-500A
