

High-Strength Hex Head Bolts

High-strength hex head bolts designed for secure fastening in various applications. They feature a hexagonal head for easy wrenching and are constructed from durable materials for reliable performance.

Product Overview

High-Strength Hex Head Bolts

These high-strength hex head bolts are engineered for demanding fastening applications in machinery, construction, and automotive industries. Featuring a classic hexagonal head design, they allow for efficient and secure wrenching during installation. Constructed from durable materials, these bolts provide the robust connection integrity required for critical structural and mechanical assemblies.

Technical Specifications

Strength Grade

4.8

Head Type

Hexagonal

Application Areas

Suitable Industries

Machinery, Construction, Automotive
