

High-Temperature Fiberglass Insulation Sleeve

This fiberglass sleeve offers thermal protection for wires and cables, capable of withstanding high temperatures up to 300°C and low temperatures down to -50°C. It provides durable, flexible insulation with resistance to corrosion.

Overview

High-Performance Thermal Protection

This high-temperature fiberglass insulation sleeve is engineered to provide robust thermal management for critical electrical and industrial components. With an impressive operating range of -50°C to 300°C, it ensures reliable insulation and protection in demanding environments. The flexible and durable design makes it an ideal solution for safeguarding wires, cables, and hoses against abrasion, corrosion, and chemical exposure.

Technical Specifications

Operating Temperature

300 °C

Max Temperature

-50 °C

Min Temperature
