

High Temperature Synchronous Motor for Ovens and Fireplace Fans

This high-temperature synchronous motor is designed for ovens and low-noise applications like fireplace fans. It operates at AC 220-240V, 50/60Hz, with a rotational speed of 2.5/3 r/min and supports both clockwise and counter-clockwise rotation.

Product Overview

High-Performance Synchronous Motor

This synchronous motor is specifically engineered for high-temperature environments, making it an ideal component for ovens and heating appliances. It features silent operation, ensuring it is also well-suited for low-noise applications such as fireplace fans. With a robust design and precise synchronization, this motor offers reliable performance and consistent rotational speed.

Technical Specifications

Regulatory Compliance

RoHS

Input Voltage	220 V
Frequency	50/60 Hz
Power Consumption	4 W
Rotational Speed	2.5/3 r/min
Rotation Direction	CW, CCW

Service & Logistics

Standard Delivery Time	Within 15 days
Customization Options	Yes
