

High-Velocity Pedestal Fan

This high-velocity pedestal fan is designed for powerful air circulation in residential and commercial environments. It features a robust motor, aerodynamically optimized blades, adjustable height, and multiple speed settings.

Overview

High-Performance Air Circulation

The HVP-30E is a high-velocity pedestal fan engineered for powerful air circulation in both residential and commercial environments. Featuring a robust motor and aerodynamically optimized blades, this unit delivers exceptional airflow for effective cooling and ventilation. With adjustable height and tilt mechanisms, it offers precise directional control, while the durable construction ensures long-lasting reliability in demanding spaces like workshops and garages.

Performance

Airflow Metrics

3 levels

Speed Settings

Design & Build

Adjustability

- Adjustable height
- Tilt mechanism for directional control

Construction Materials

Durable Metal, Aerodynamic Blades, Reinforced Base

Applications

Ideal Environments

Garages • Workshops • Commercial Spaces • Living Areas
