

High Voltage Disconnecting Switch

High-voltage disconnecting switches isolate electrical equipment. They provide a visible break in the circuit to ensure safe maintenance and repair.

Product Overview

High Voltage Disconnecting Switch

This high-voltage disconnecting switch is engineered for reliable electrical isolation in demanding industrial environments. Designed with robust construction and high-quality insulators, it provides a clear, visible break in the circuit to ensure safety during maintenance and repair operations. The unit is manually operated and available in various configurations to suit specific high-voltage application requirements.

Technical Specifications

Key Features

- Visible circuit break
- High voltage isolation
- Robust construction
- Configurable design

Operation

Manual

Insulator Material

Porcelain, Composite
