

# High-Voltage Electrical Substation

This high-voltage electrical substation is designed for efficient power distribution. Its components include transformers, circuit breakers, and surge arresters for safe and reliable operation within large-scale power grids.

## Overview

### High-Voltage Electrical Substation

This high-voltage electrical substation is designed for efficient power distribution across large geographical areas. It features a complex network of transformers, circuit breakers, and transmission lines, ensuring reliable and safe energy transmission. Constructed from durable, corrosion-resistant galvanized steel, it is engineered for long-term integration into large-scale power grids.

## Technical Specifications

### Key Components

- Transformers
- Circuit breakers
- Transmission lines
- Busbars
- Insulators
- Surge arresters

Voltage Rating	132/33kV
----------------	----------

## Construction

Structural Material	Galvanized steel
Durability Features	Corrosion resistance, Long-term durability

## Project Experience

### Project Scope

**29 units**

Substations Built

**819 km**

Transmission Line

Project Timeline	2000 - 2003
------------------	-------------
