

High Voltage Lightning Arrester

This high-voltage lightning arrester protects electrical systems from surges. It features robust construction for harsh environments, providing insulation and arc dissipation.

Product Overview

High-Voltage Lightning Arrester

This high-voltage lightning arrester is engineered for robust electrical system protection. Featuring a durable construction with multiple sheds, it provides enhanced insulation and superior arc dissipation capabilities. It is specifically designed to perform reliably in outdoor applications and harsh environmental conditions, ensuring effective defense against lightning strikes and voltage transients.

Technical Specifications

Protection Features

- Surge protection
- Lightning strike defense
- Voltage transient suppression
- Enhanced arc dissipation

Application Environment

Outdoor, Harsh Conditions

Design & Construction

Insulation Performance

Enhanced Insulation

Construction Type

Robust multi-shed design
