

# High Voltage Surge Arrester

This high-voltage surge arrester protects electrical equipment from overvoltage. It features a stacked disc design and mounting bracket.

## Overview

### Advanced Surge Protection

This high-voltage surge arrester is precision-engineered to shield critical electrical infrastructure from transient overvoltage events, including lightning strikes and switching surges. Featuring a robust stacked disc design, it offers superior insulation properties and effective arc-quenching capabilities. Designed for reliability in transmission and distribution networks, this unit provides essential protection for transformers, switchgear, and other high-value assets.

## Technical Features

Construction	Stacked disc design
Applications	Transmission Systems, Distribution Systems, Transformer Protection, Switchgear Protection

## Installation

Mounting	Yes
Grounding	Integrated reliable grounding system
