

Highway Construction Project

This construction project includes a curved highway with a dark asphalt surface and white lane dividers. A metal guardrail runs alongside the road, with power lines overhead.

Project Overview

Highway Construction Infrastructure

This high-standard highway construction project represents excellence in civil engineering, having been recognized with national high-quality awards. The infrastructure is designed to meet rigorous safety and durability standards, ensuring long-term utility and reliable performance. It serves as a benchmark for modern transport networks, emphasizing quality and user satisfaction in large-scale construction engineering.

Certifications and Awards

Project Status

National High Quality Project

Awards Received

Luban Prize, Zhan Tianyou Civil Engineering Award

Technical Specifications

Safety Infrastructure

- White lane markings
- Metal guardrails
- Transmission tower integration

Road Surface

Dark asphalt
