

Highway Engineering Spiral Borer

This spiral borer is designed for highway engineering projects. It features a robust engine, large tires for stability, and durable construction.

Product Overview

Industrial Spiral Borer for Highway Engineering

This heavy-duty spiral borer is engineered for demanding highway construction and civil engineering projects. It is built with a robust engine and large, stable tires to ensure consistent performance in varied field environments. Designed for efficiency, this machine serves as a reliable solution for soil compaction and large-scale road construction tasks.

Technical Specifications

Equipment Category

Engineering Machinery • Drilling Equipment

Primary Application

Highway Engineering, Road Construction, Soil Compaction

Design Features

Construction Build

- Robust heavy-duty engine
- Large tires for enhanced stability
- Durable frame for demanding environments
