

HJ92F Mechanical Seal

The HJ92F mechanical seal is a robust sealing solution designed for demanding industrial applications. It is engineered to withstand high pressures and temperatures, making it suitable for use in pumps, compressors, and other rotating equipment.

Overview

High-Performance Mechanical Seal

The HJ92F mechanical seal is a robust sealing solution designed for demanding industrial applications. Engineered to withstand high pressures and temperatures, it is suitable for use in pumps, compressors, and other rotating equipment. Its design incorporates advanced sealing technology to minimize leakage and prevent contamination, contributing to improved operational efficiency and reduced maintenance costs.

Technical Specifications

Available Sizes

- 30
- 40

Primary Application	Dairy industry agitators
Compliance	Industrial Standard
