

Holographic LED Advertising Display

This cutting-edge display solution captivates audiences and enhances brand visibility. It utilizes advanced LED lighting technology to project high-resolution, three-dimensional holographic images, creating a visually stunning and memorable experience.

Product Overview

Innovative 3D Holographic Visuals

This holographic advertising machine utilizes ultra-high density LED light bands and wireless power supply technology to create stunning, suspended 3D images. By leveraging the principle of human visual persistence, it delivers a naked-eye 3D effect that significantly outperforms traditional 2D advertising displays. Designed for versatility, this system supports convenient installation and flexible content replacement, making it an ideal solution for dynamic brand engagement.

Technical Features

Display Technology	LED light band with wireless power supply
Visual Effect	Naked-eye 3D holographic projection
Key Advantages	Air suspension effect, Naked-eye 3D, Easy installation, Dynamic content updates, Multiple unit synchronization

Application & Usage

Suitable Environments

- Conference activities
- Office buildings
- Hotels
- Shopping malls
- Brand displays

Primary Use Case

Advertising • Interactive display
