

Hook Type Shot Blasting Machine

The hook type shot blasting machine eliminates the need for pit construction, reducing overall costs. A new separator design ensures more thorough and efficient cleaning.

Product Overview

Industrial Surface Treatment

This Hook Type Shot Blasting Machine is designed for high-efficiency surface preparation without the need for a pit structure, significantly reducing construction costs. It features a compact design, simple operation, and an advanced separator system for thorough cleaning. Ideal for various industries, this machine delivers consistent metallic luster by removing rust, welding slag, and scale from iron, steel, and forging pieces.

Technical Specifications

Performance Data

Component	Technical Detail
Blast Wheel	Frequency transformer controlled
Shot Blasting Chamber	High chromium wear plate
Conveying Capacity	90-120T/H
Separator	Pneumatic concentrator
Control System	Mitsubishi PLC
Wire Diameter Range	6-30 mm
Cleaning Speed	60-90 m/min

Power Requirements

380 V

Working Power

220 V

Operating Power

General Information

Certifications

CE • ISO

Available Models

QZ Series, Q37 Series

Automation

Automatic
