

Horizontal Bead Mill for Wet Grinding

This horizontal bead mill is designed for wet grinding and dispersing materials. It features a cylindrical grinding chamber with multiple inlets and outlets for continuous processing.

Product Overview

Industrial Horizontal Bead Mill

This horizontal bead mill is expertly engineered for precision wet grinding and dispersing of materials. It features a robust cylindrical grinding chamber designed for continuous processing with multiple inlets and outlets to ensure uniform output. Equipped with integrated pressure monitoring and intuitive control systems, it is an essential solution for applications requiring fine particle size reduction and high-quality homogeneous mixing.

Technical Features

Grinding Mechanism	Horizontal wet grinding and dispersing
Flow System	Continuous processing with multi-port inlets/outlets
Transfer Mechanism	Diaphragm pump

Instrumentation & Control

Control Panel	Indicator lights, Control switches, Pressure gauges, Emergency stop
---------------	---

Applications

Primary Applications

- Fine particle size reduction
- Homogeneous material mixing
- Continuous wet grinding
