

Horizontal Bitumen Storage Tank with Automatic Temperature Control

The horizontal bitumen storage tank provides efficient and eco-friendly combustion for bitumen heating. It features automatic temperature control, maintaining the set temperature with automatic heating, shutoff, and restart functions.

Product Overview

Efficient Bitumen Storage and Heating

This horizontal bitumen storage tank is engineered for high-efficiency heating and reliable storage, essential for road construction and roofing industries. It features advanced automatic temperature control, allowing operators to pre-set target temperatures for precise heating cycles. Built with durable steel and robust insulation, the system minimizes heat loss while ensuring stable bitumen properties for easy handling.

Technical Specifications

Horizontal bitumen tank featuring a 50T capacity, designed for mobility and efficient site placement.

Capacity Range

20 m3

Minimum Capacity

50 m3

Maximum Capacity

Heating Options

Thermal Oil, Electric, Direct Burner

System Components

Key Components

- Insulated Storage Unit
- Oil Burner & Combustion Chamber
- Bitumen & Oil Circulating Pumps
- Mixer System
- Temperature Displays
- Pressure Relief System
- Power Distribution Box

Primary Material

Durable Steel

Operational Features

Control Features

Automatic Temperature Control • Auto Start/Stop Heating • Pump Preheat System
