

Horizontal Centrifugal Pump for Industrial Applications

This horizontal centrifugal pump is designed for a wide range of industrial pumping applications. The pump's horizontal configuration allows convenient installation and delivers consistent performance in demanding environments.

Product Overview

Industrial Fluid Transfer Solution

The DFW (DFWR) type horizontal centrifugal pump is a robust and efficient solution engineered for a wide range of industrial pumping applications. Designed with a focus on reliability and ease of maintenance, this unit features a durable construction and a horizontal configuration that simplifies installation. It delivers consistent, high-performance fluid transfer, ensuring optimal system efficiency even in demanding operating environments.

Technical Specifications

Design Focus

Reliability • Easy Maintenance • Industrial Grade

Pump Configuration	Horizontal Centrifugal
Series	DFW, DFWR
