

Horizontal Flow Wrapper

This horizontal flow wrapper is designed for the automatic packaging of diverse products. It provides precise sealing to maintain product freshness and improve presentation.

Overview

High-Efficiency Horizontal Flow Wrapper

The BZJ-380 is a versatile horizontal flow wrapper designed for the automatic packaging of food items, hardware, and various small to medium-sized products. It features a robust construction for continuous, long-term operation in medium to high-volume production environments. The system ensures precise sealing and consistent presentation to maintain product freshness while maximizing floor space with its compact design.

Key Features

Core Components

- Adjustable film reel holder
- Forming box
- Sealing jaws
- Discharge conveyor
- Integrated control panel

Performance

Operational Capabilities

380 BZJ
Model Series

Production Suitability

Suitable for medium to high volume production environments.

Technical Control

Adjustable Parameters

Packaging Speed, Sealing Temperature, Cut Length

Applications

Target Applications

Food Items • Hardware • Small Products • Medium Products

Design & Construction

Construction Quality

Robust construction designed for reliable operation and long service life.

Space Utilization

Compact design optimized for maximum floor space utilization.
