

Horizontal Food and Beverage Sterilizer

This horizontal autoclave is designed for sterilizing food, beverage, and cereal products. It features a stainless steel chamber, pressure gauge, and control panel for industrial food processing.

Overview

Industrial Sterilization Solution

This horizontal autoclave is engineered specifically for the sterilization of food, beverage, and cereal products in industrial settings. It features a robust cylindrical stainless steel chamber designed to withstand rigorous processing demands. Equipped with precise pressure regulation systems and a comprehensive control panel, it ensures consistent and reliable sterilization results for high-volume production.

Technical Specifications

Chamber Configuration	Horizontal cylindrical
Construction Material	Stainless steel
Suitable Applications	Food Processing, Beverage Production, Cereal Processing

Control & Operation

Control Interface

- Integrated control panel
- Multiple switches
- Status indicators
- Pressure gauge

Regulation Components

- Steam regulation valves
- Pressure regulation valves
- Motor-driven mechanism

Structural Features

Robust Support Frame • Industrial Grade
