

Horizontal Injection Molding Machine

This horizontal injection molding machine produces plastic parts by injecting molten material into a mold. It consists of an injection unit, clamping unit, control panel, and material hopper.

Overview

High-Efficiency Horizontal Injection Molding

This horizontal injection molding machine is engineered for high-precision manufacturing of plastic components. Designed with a robust clamping and injection unit, it ensures consistent material delivery and mold stability for mass production environments. The intuitive control interface allows operators to precisely manage process parameters, enhancing repeatability and operational efficiency.

Machine Specifications

Machine Configuration	Horizontal
Model Identifier	UN30SH

Key Features

Core Features	High Precision, Repeatability, Mass Production Ready, Integrated Control Panel
---------------	--

Safety & Compliance

Safety Systems

- Safety Interlocks
- Protective Guards
- Process Monitoring
