

Horizontal Metal Band Saw

This horizontal band saw is engineered for cutting metal materials. It features a robust frame, hydraulic clamping, variable speed control, and a coolant system for efficient cutting.

Overview

Industrial Horizontal Band Saw

This horizontal band saw is engineered for precise and efficient metal cutting in industrial and manufacturing environments. It features a robust frame construction ensuring stability during operation, complemented by a hydraulic clamping system for secure workpiece holding. Equipped with variable speed control and an integrated coolant system, this machine is suitable for processing a wide variety of metal shapes and sizes.

Key Features

Core Capabilities

- Robust frame construction
- Hydraulic clamping system
- Variable speed control
- Integrated coolant system

Technical Specifications

Primary Application

Metal Cutting • Industrial Use • Manufacturing

Model Identifier

GB4260X80
