

Horizontal Pillow Packing Machine

This horizontal pillow packing machine is designed for efficient packaging. It features adjustable film feeding, precise temperature control, and customizable bag length, suitable for food, hardware, and consumer goods.

Product Overview

Horizontal Pillow Packing Machine

This horizontal pillow packing machine is designed for efficient, high-speed packaging of various solid regular objects. Featuring dual transducers for precise bag length control and independent PID temperature regulation, it ensures consistent sealing quality across different materials. The system is engineered for reliability and ease of maintenance, with software-based control that allows for simple function adjustments and future technical upgrades.

Technical Features

Control System

- Dual transducers for one-step bag length adjustment
- Independent PID temperature control
- Software-based operation for easy adjustments
- High-sensitivity electrical eye tracking

Operational Benefits

- Self-diagnostic failure display
- Positioned stop function to prevent film waste
- Simple driving system for reliable operation
- Numerical input for sealing position accuracy

Applications

Packaging Methods

Carton loaded • Tray loaded

Suitable Products

Biscuits, Bread, Instant Noodles, Ice Cream, Mooncakes, Candy, Medicine, Hardware
