

Horizontal Rubber Block Cutting Machine

This rotating-disc cutting machine is designed for processing natural, compound, reclaimed, and synthetic rubber. It cuts rubber blocks into smaller blocks, slices, granules, and bars.

Product Overview

Horizontal Rubber Block Cutting Machine

This horizontal rubber block cutting machine is a specialized, rotating-disc type cutter designed for high-efficiency processing of various rubber materials, including natural, compound, reclaimed, and synthetic rubber. It is capable of reducing rubber blocks into smaller, manageable forms such as slices, granules, bars, and blocks, making it a versatile tool for industrial rubber processing lines. With robust construction and hydraulic control, the machine ensures consistent performance, durability, and precise material handling for demanding production environments.

Technical Specifications

Detailed view of the machine structure, including the cutting guide plate, worktable, and control box for precise operation.

Main Technical Specifications

Specification	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Rotational Speed	50r/min	50r/min
Power	4+2.2kw	4+2.2kw
Working Pressure	5Mpa	5Mpa
Production Capacity	2t/h	3t/h

Capabilities

Compatible Materials

Natural Rubber, Compound Rubber, Reclaimed Rubber, Synthetic Rubber

Output Forms

Blocks, Slices, Granules, Bars

Operational Features

Working principle: Utilizes a rotating-disc cutter and hydraulically controlled worktable with reciprocating motion for efficient rubber processing.

Performance Metrics

5 Mpa

Working Pressure

50 r/min

Blade Speed

Hydraulic Operation

Yes
