

# Horizontal Spiral Loop Forming Machine

This horizontal spiral loop machine forms continuous loops of metal reinforcement. It features adjustable settings for loop diameter and pitch, along with safety mechanisms.

## Overview

### Horizontal Spiral Loop Forming Machine

This horizontal spiral loop machine is expertly designed for the continuous forming of metal reinforcement loops. Built with heavy-duty steel and a robust drive mechanism, it is engineered for high-volume production environments. The system features a large rotating platform with a central mandrel, ensuring uniform loop formation through precise guides and rollers.

## Key Features

### Production Capabilities

- Uniform loop formation
- Adjustable loop diameter
- Adjustable pitch settings
- High-volume production capacity

## Safety & Construction

<b>Safety Features</b>	Emergency Stop, Protective Guarding
<b>Construction Material</b>	Heavy-duty steel

## Design Details

<b>Forming Mechanism</b>	Rotating platform with central mandrel
