

# Horizontal Split Case Centrifugal Pump

This horizontal split case centrifugal pump is designed for high-capacity water transfer and boosting applications. It features a robust construction with a horizontally split casing for easy maintenance and impeller access, making it suitable for various industrial and municipal water systems.

## Product Overview

### High-Capacity Performance

This horizontal split case centrifugal pump is engineered for demanding high-capacity water transfer and boosting applications. The robust design features a horizontally split casing, which simplifies maintenance procedures and allows for easy access to the impeller. It is an ideal solution for large-scale industrial and municipal water management systems.

## Technical Specifications

### Design Advantages

- Horizontally split casing design
- Easy impeller access
- Simplified maintenance procedures
- Robust construction

### Pump Configuration

Horizontal Split Case Centrifugal

### Primary Applications

Industrial Water Systems, Municipal Water Supply, High-Capacity Transfer, Water Boosting
