

Horizontal Trolley Tower Crane

This tower crane is used at construction sites for lifting materials. It features a horizontal jib with a trolley that moves loads along the crane's length.

Overview

Horizontal Trolley Tower Crane

The QTZ5013 is a high-performance tower crane engineered for demanding construction environments. Featuring a robust horizontal jib with a precision trolley mechanism, it excels at moving heavy materials across large site footprints. The structure is supported by a stable vertical mast, ensuring reliability for building and infrastructure projects.

Performance

Key Performance Metrics

50 m

Max Jib Length

13 t

Tip Load Capacity

Safety and Compliance

Integrated Safety Systems

Overload Protection, Limit Switches

Application

Common Industrial Applications

- High-rise building construction
- Bridge infrastructure projects
- Large-scale commercial site development
