Product Overview

Comprehensive Irrigation and Fluid Handling Set

This versatile set combines essential components for fluid management and irrigation systems, featuring durable hose clamps, a robust self-priming centrifugal pump, and a high-performance impact sprinkler head. Designed for both industrial and agricultural utility, these components are engineered for reliability, corrosion resistance, and efficient operation. This collection provides a complete solution for secure hose connections, effective water transfer, and customizable landscape irrigation.

Hose Clamps

Key Features

- Adjustable tightening mechanism
- Leak-proof seal
- Slotted band design

Material

Stainless Steel, Galvanized Steel

Self-Priming Centrifugal Pump

Primary Applications

Water Transfer • Irrigation • Dewatering

Design Features

- Self-priming capability
- Volute casing
- Optimized impeller
- Flanged suction and discharge ports

Construction Material

Cast Iron

Impact Sprinkler Head

Performance Features

- Adjustable spray pattern
- Deflector shield for precise control
- Impact arm for consistent rotation
- Corrosion and UV resistant

Material Composition

Engineering-grade plastic and metal components

Coverage Range

Partial arc to full 360-degree circle
