Product Overview

High-Efficiency Reconstitution and Filling

This industrial-grade processing line is engineered for the reconstitution of juice and nectar from concentrate. The system utilizes a high-speed rotary filling mechanism designed to handle both Can and PET bottle packaging formats with precision. Built with stainless steel, it ensures optimal hygiene and durability while meeting stringent food safety standards.

Technical Specifications

Filling Technology	High-speed rotary filling system with multiple filling heads
Compatible Packaging	Can, PET Bottle
Construction Material	Stainless Steel

Operational Features

Sanitation

CIP Integrated • Automated Sanitation

Control & Monitoring

- Advanced control systems for parameter monitoring
- Temperature control systems
- Filling parameter adjustment
- Protective housing with transparent panels

Processing Stages

Stage	Function
Reconstitution	Juice concentrate processing
Heating	Temperature-controlled filling
Filling	Rotary filling mechanism
Cooling	Product safety and shelf-life maintenance
