

Hot Juice Bottling System

This machine integrates rinsing, filling, and capping processes for efficient juice production. It is designed for high-speed operation and precise filling, ensuring consistent product quality and minimizing waste.

Overview

Comprehensive Juice Bottling Solution

This hot juice bottling system is a high-performance, integrated solution designed to streamline production by combining rinsing, filling, and capping into a single, efficient unit. Engineered for high-speed operation and precise volumetric control, the system ensures consistent product quality while minimizing waste. Built with high-grade stainless steel to meet rigorous food and beverage hygiene standards, this machine offers the reliability and durability required for large-scale operations.

Technical Specifications

Material

Stainless Steel

Model Designation

RCGF32-32-10

Integrated Functions

Rinsing, Filling, Capping

Key Performance Metrics

Operational Capabilities

32 units

Rinsing Heads

32 units

Filling Heads

10 units

Capping Heads

Features & Control

Control & Automation

- Advanced control technology
- Automated operation
- Adjustable filling volumes
- Adjustable capping tightness
